DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Strobl et al in view of O'Day et al further in view of Vary et al. The above claims are readable on the patent to Strobl et al with the exceptions of having a) an air intake or introducing pipe and an exhaust pipe extending from a floor plate through side frames, and b) flap valves for controlling the inlet of an air intake or introducing pipe and a gas discharge pipe in response to a fan or blower. The patent to O'Day et al teaches exception a) and the patent to Vary et al teaches exception b). In view of the teaching of O'Day et al, it would be obvious to one of ordinary skill in the art, at the time the invention was made, to provide exception a) to the hermetic or closed trunk 33 that houses the hydrogen fuel tank 21 or a passenger compartment to detect and remove gaseous fumes or vapors by ventilation means such as a blower or fan as taught by elements 12 and 21-23, if desired. Note that Strobl et al teaches a ventilation means 36 that controls an

intake valve 37. In the patent to O'Day et al the floor plate is defined as element 12 that elements 21 and 22 are received there through. Also, the left and right side frames are readable on the vehicle or boat body that elements 22 and 21 exit there from, respectively. Further in view of the teaching Vary et al, it would be obvious to one of ordinary skill in the art, at the time the invention was made, to provide exception b) to the combination of Strobl et al in view of O'Day et al to add flap valves for controlling the inlet of an air intake or introducing pipe and a gas discharge pipe in response to a fan or blower as taught by elements 62 and 66 and column 3, lines 11-38, if desired. Such teachings provide no unobvious or unexpected results.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
